SCOPE

LUMINESCENT FORMS

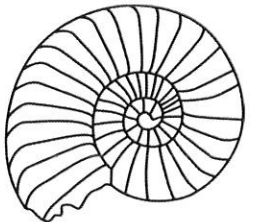

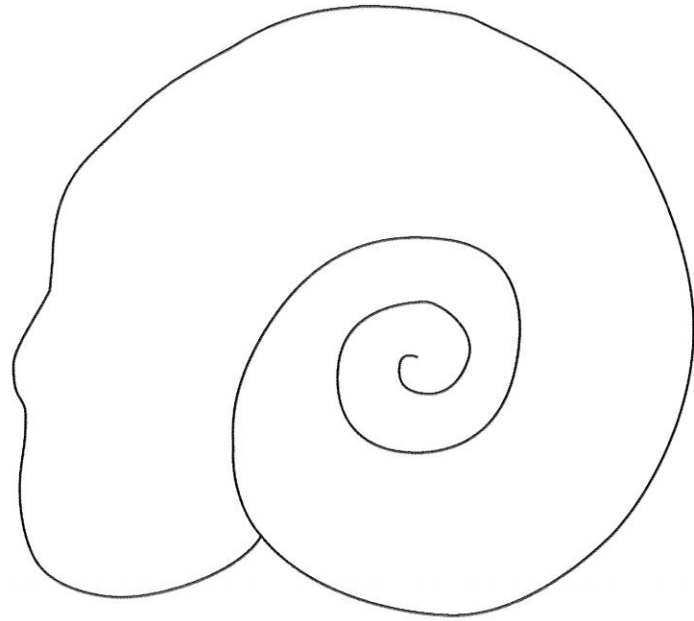

Recreate your own interpretations of the foraminifera in the blank space provided!

Spiral patterns are observable throughout nature and the known universe, the microcosm and macrocosm, innerworlds and outerworlds, as small as you can imagine and as large as you can imagine. Below are a few examples of continuously occurring spiral patterns in nature from something as small as the foraminifera shown in this exhibition to something as large as the galaxy that we live in.

Turn the page and continue the incomplete spiral pattern provided and color it as you please.

Mark on the map the areas that the foraminifera displayed in the exhibition can be found.
